

Hall Chadwick QLD Launches Financial Dashboard Management Reporting

Hall Chadwick QLD (HCQ) have launched a cloud based dashboard management reporting service that syncs automatically with cloud based management accounting software such as Xero, MYOB and Quickbooks.

This new initiative brings technology and expertise together to deliver improved levels of service and business optimisation for our clients. Managing cash flow is critical to any business and being able to access this type of real time reporting and re-forecasting will enable clients to maintain better control over key functions within their business.

The dashboard reporting gives a snapshot of sales, gross profit, expenses, Net Profit as well as cash at bank, receivables etc for the Month to Date and Year to Date. It is also connected to a three way forecasting model and therefore enables an automatically updated forecast of future cash flow and bank balances.

Each HCQ Director has access to the dashboards so that they can quickly and easily keep up to date with what is happening in their clients business. The system will send alerts out to the client and the HCQ Director if pre-set thresholds are breached, such as sales targets, bank account balances, debtor levels etc. Once the dashboard system has been set up it updates automatically so there is no further cost to maintain it.

If you are interested please contact your HCQ Director to enquire as to how your business can be set up for access to this service.
